

Domino **i-Tech** G-Series inks

Thinking differently with the latest G-Series **i-Tech** inks

Domino's independently tested BK107 ethanol-based and BK651 water-based inks offer greater contrast over longer periods of time than other Thermal Ink Jet (TIJ) leading fluids. They are ideal for a mixture of substances from porous pharmaceutical and food packaging through to non-porous confectionery, beverages and biscuits packaging.

You can save time and money by using the new **i-Tech** G-Series throughout your whole production line - including multiple substrates across primary and secondary coding applications - using **i-Tech** inks.

Inks

- Both inks offer between one and two seconds' drying time. BK107 (Domino's ethanol ink) offers a 2 hour idle time between print runs, before impacting code quality, while BK651 (a water-based ink) gives 16 hours.
- BK651 is ideal for human readable codes and data matrix coding on general purpose substrates such as carton board
- BK107 provides excellent adhesion qualities that are highly resistant to abrasion and deterioration after application to a range of substrates such as Polyethylene, POPP, Cast PP and Polyester/PET
- Both BK107 and BK561 conform to Domino's stringent Fluids Policy which reflects the recognised industry guidelines, such as the EuPIA Guideline for Food Packaging Inks

i-Tech Cartridge

- Plug your smart cartridge in and automatically complete the basic configuration, allowing you to start coding quicker. Improve your production planning with accurate ink level management.

Easy to use

Whether your production line is simple or complex, the **i-Tech** G-Series range is easily integrated, with its new compact print head. Domino's **i-Tech** G-Series Thermal Ink Jet (TIJ) printers offer the ability to print both solvent and water based fluids onto a variety of substrates.

- Low running costs – low cost per print
- High resolution, high speed printing
- Inks developed to match your substrates
- Easy to use with virtually no maintenance
